

4 way of Seeing

Marc

*** The Architect* (INTJ-A)**
Introverted 71%
Intuitive 59%
Thinking 78%
Judging 63%
Assertive 51%
Role: Analyst
Strategy: Confident Individualism

Sandra (My wife)

*** The Consul* (ESFJ-A)**
Extraverted 90%
Energy 77%
Nature 51%
Judging 61%
Assertive 90%
Role: Sentinel
Strategy: People mastery

How Does Marc view Marc
I am definitely and introvert and don't like to interact with any friends outside of work
I always use logic and rarely follow my intuition
I consider thinking to be an essential part of approaching problems.
I am a very judgmental person and I usually form a strong opinion about someone briefly after meeting them
I usually am quick in taking decisions and rarely change my mind or feel remorseful about any decision I make.

How does Sandra view Sandra
I am a highly sociable person that enjoy the company of other people
I am always smiling and make other persons feel at ease
I am energetic most of the time, I like exercising regularly and like all outdoor activities
I am not judgmental and tend to listen to both sides of the story before giving my opinion
I have trouble making up my mind and am usually not assertive at all

How does Marc View Sandra
She is always smiling and joyful
She is easily approachable
She is tolerant and likes to plan everything
She forgives and forgets easily and is very easy to be around
She however has trouble deciding and usually seeks help when she is struggling to reach a decision
She is impatient when and wants things to be done her way
She is a perfectionist when it comes to things that she likes

How does Sandra view Marc
He is always focused when he has job to do and is very much goal oriented
He gets ticked easily and can lose his temper which could ruin his day
He sometimes acts impulsively and does not think his decisions through
He is very generous and compassionate with others
He prefers to be lonely that to be in a room full of friends
He appreciates true friendship and is very loyal
He is very patient when he is goal oriented

FT4 Rules

COVID 19 certificate.pdf

Rule #1: I watched and reviewed this presentation
Rule #2: I completed COVID19 contact tracing course (see attached pdf certificate)
Rule #3: I completed 4 ways of seeing the 16 personalities test
Rule #4: I reviewed and read the following in SL (Chapter 2.3 and Chapter 9,2) and HC textbooks (Chapter 6)
Rule#5: I completed FT4 questions and used the SEE-I method to post it in Wordpress and Facebook
Rule#6: I completed the Feedback survey

Class structure questions

- The class is very well organized
- Just finding out what to do every week
- A syllabus with deadlines and clear things to do on a weekly basis
- I gave it a chance since I thought I will be learning something new about Healthcare administration
- I am confused still as to what the aim of the course is, I am finding myself learning and reading about a new learning methodology called Swarm learning. I am completing personality tests and doing things that are irrelevant to the course material. I am failing to see the point of all of this but can not drop the course at this stage.

KT1, KT2, EM3 questions

- My thoughts where that I am learning something new and that it was a nice structure with clear guidelines on how to complete the assignment
- My thoughts on KT2 was that I am not learning enough about healthcare administration but rather about SL methodology and technique.
- My thoughts on EM3 where the same for the KT1 and KT2. It is interesting to know how to deconstruct an idea and how to write a blog but unfortunately, this is not what I hoped I would learn here. I am disappointed about the course so far.
- My thoughts on FT4 is that it is not relevant to the topic of the course. What will my personality test help in achieving. I am failing to see the light at the end of the tunnel and am starting to think that I will not learning anything of substance.
- I think I will go for an essay, I am not completely sure. Writing a blog seems easy, especially after reading what other people put out there. Still undecided.

Syllabus questions

- Nothing in particular, I like to take things step by step. I always visualize what the task is at hand on a weekly basis and I go for it. I have found this technique to be better than to analyse a large amount of information that can lead to a sense of overwhelmingness
- The how to videos are definitely helpful but I would make them shorter and to the point, some elements you keep on repeating are redundant and unfortunately you sometimes fail to tell us where to go to see the videos, I had to struggle initially.
- Make the Syllabus structured more on what we have to do on a weekly basis with tentative dates on when to do this and make your how to videos shorter and to the point.

Textbook Questions

- The required textbook is interesting to say the least (SL) but is not something I would pick to read on my own time. It attempts to desperately sell you the concept that SL is the best way to teach but so far I am not convinced. As for the other HC textbook, it is difficult to read with too much information scattered in every chapter.
- The SL textbook is easy to read.
- The students quotations are annoying and interfere with the flow of ideas. Most of them are distracting.

SL Facebook group questions

- Yes I joined the group because I had to.
- I don't think that the Facebook group is useful or constructive for the course overall.
- I would cancel the Facebook group altogether. Facebook is a social platform that is unprofessional to hold discussions on. I would prefer LinkedIn or any other platform. I don't mind creating a whatsapp group but not Facebook. I had to create an account 10 years after disabling my account and now I have friend requests from people I barely know, patients that I treated or operated on, it is very annoying and useless overall.

NFCC and personality survey questions

- It is just one of those personality surveys that vary everytime you take it depending on your mood. It is by no way accurate or reproducible. It did not reveal anything I did not know already and it revealed a lot of other things that are simply untrue and unfounded.
- My score is comparable to a lot of people in the group
- Not really
- I think the personality and the NFCC survey are two faces of the same coin, both of them are highly unscientific and by no measure remotely reproducible. They are easily affected by how you are feeling when you are completing the survey.

Plectica Questions:

- Plectica is nice platform to submit assignments, it allows the person to show how creative he is.
- It is getting easier to use but I really want to do the essentials on it.
- Definitely not

Survey Monkey Questions

- It's too much to have survey's every step of the way.
- I would not read them, because I would have a clear and rigid program established from the start.
- This is the first class with continuous feedback that I attend. I can understand the appeal but I don't honestly think that it is useful. I know that you acted on one of my feedbacks of having a clear video of what to do on a weekly basis or have clear instructions but this could have been avoided if the course was structured differently. I am as you realize by now, not a big fan of this teaching method. I don't really care if this will affect my grade but I have to clearly say it. I am a hard worker individual who got to this stage in life by learning the traditional way. What matters by the end of the day is how much effort you put into something, especially if you are passionate about it. I understand that Professor Schwandt is really passionate about SL but his passion is affecting how the course is provided. As a student, I feel cheated by not learning what I signed up for. I am sorry, but this is how I feel and I highly suspect that a lot of students feel the same way but are afraid to say so.

Other questions

- The fact that there is no stress
- The fact that I am not learning about administration in healthcare
- I would reduce the teaching about SL and increase the teaching about the material that we signed up for.
- I already know what is in store, and it looks bleak.
- Already discussed the SL book, it is easy to read but has distracting bits that are useless.
- Remove the prior students feedback or at least reduce them.
- I thought it was lousy in forming an outline and I will never use it again.
- The toulmin method is a nice method of deconstructing something but I don't think that this is something new, it was already there but someone just gave it a name.
- The thesis generator was very poor, it all depends on the information you put, so better off writing the thesis yourself.
- I only read 2 chapters so far from the HC textbook, it was poorly written, material is condensed and not clearly explained and it lacks a good flow of ideas.
- It is just another fancy name for a form to structure our ideas, it does not add much.
- It is a ridiculous certificate that anybody can get, I completed the whole course for less than 30 minutes and was surprised by how easy you can get certified in something. I am still surprised that Johns Hopkins will put their name on the certificate.
- No they are not a good idea. If it was not mandatory, I would not have taken it in a million years. It is better to focus on the topic of the course.
