

1. What was the one thing you enjoyed most about this class?

The ability to give my feedback and be heard.

2. What was the one thing you least enjoyed about this class?

SL method of teaching and the fact that i did not learn about healthcare administration

3. If you completed your essay or blog, then what are your thoughts? Did you enjoy writing it? Please explain?

I enjoyed reading about my topic and enjoyed researching and writing it. I always had an idea about the topic i chose but reading more about it was a nice change from the usual routine stuff that i read.

4. Did you enjoy your topic? Did it help transfer knowledge from the topic itself to the concepts you were learning in class?

I enjoyed reading about my topic, i researched and wrote the paper just like i do for every single project i have by using the same methods that i picked up throughout the years. I don't think i used concepts taught in this class but if i ever did that it was without me realizing it.

5. What was your favorite program to use in this course?

Plectica was a good platform to use when it worked properly.

6. What was your least favorite program?

The essay helper program, i thought it was useless.

7. Which student blog or essay did you enjoy reading the most?

I enjoyed reading the blog about Biommicry mostly, it was well written and easy to grasp.

8. Was it a huge relief not having to take tests or would you have preferred taking tests?

It does not matter much to me, i would have taken a test if i acutally learned something about healthcare administration but having a test on SL will not be very fun because i did not like it much.

9. On a scale of 1-10 (10 being the highest) how confusing was this class?

It was not confusing in the way the material was presented, on the contrary it was very organized. But it was disappointing in the way it was taught, so i will give a 7/10

10. If you had to do it all over again, would you still have taken this course?

Definitely no, i wish i knew what it was all about before.

11. What is one thing you definitely learned while taking this class?

That sometimes a book can be judged by its cover.

12. What is one thing you plan to immediately forget once this class is over?

Two words Swarm Learning.

13. Do you agree with Dr. Schwandt's Swarm Learning methodology? Please explain.

No i don't agree because he places too much of an emphasis on the methodology and less on the material being taught and this is disorienting and counterproductive.

14. In your own words, what is Swarm Learning?

Just an alternate less better way of teaching something.

15. If you were a teacher, would you use Swarm Learning in your class?

Definitely not.

16. Would you take another class with Dr. Schwandt as the professor?

If it involves SL then no.

17. How can the Facebook Group be improved?

It can be not included for the class.

18. Are you more comfortable with ambiguity than when the class first started?

Didn't find it ambiguous to start with just disappointing.

19. If you had to retake the NFCC survey, how would you score?

I guess, exactly the same score.

20. What were your thoughts on the how-to video's?

They were informative and useful.

21. Did it help not having to complete the last few assignments so that you could focus on your essay or blog? Please explain.

For me it would have been the same. I know how to manage my time really well so it would not have been a problem.

22. On a scale of 1-10 (10 being the highest) how would you rate this class?

1/10

23. In your opinion, should other professors try to use and mimic Swarm Learning?

No, please don't.

24. What changes did you see during the progression of this class?

The same overall, no real change.

25. What is one change you would immediately implement in this class?

Stop focusing on SL methodology and teach more about the material involved.

26. Would you recommend this class to another student? Please explain.

No i would not, unless the other student is not interested in studying something new and wants a high grade, then it would be OK but not for me for sure.

27. What would you tell someone interested in taking a class with Dr. Schwandt using Swarm Learning?

I would tell him Good luck maybe it's for you but it is not definitely for me.

28. Was this class as difficult as you initially thought?

No, it was exactly what i thought.

29. What are your final thoughts about this class?

I hope that this course changes in terms of what it teaches and stop focusing on the learning methodology, my advice is stop advertising about what you want to do and just do it without reminding us every step of the way about how awesome it is.
